Stop Building Ideas Nobody Wants

The Signal Test Method: A 30-Day Side Hustle Workbook to Test Demand Before You Build

By Daniel Brooks

Copyright © 2026

This workbook is for educational purposes only. It does not provide financial advice and does not guarantee income, business results, or sales. Your results depend on your skills, market, offer, effort, timing, and many other factors.

Before You Build Anything

Most ideas do not fail because people are lazy.

They fail because nobody tested demand early enough.

This workbook forces you to do the opposite.

In the next 30 days, you will talk to real people, test a real problem, make a tiny offer, and ask for real money.

If nobody pays, you stop or pivot.

If someone pays, you continue.

That is the entire game.

Most people don't fail because they're lazy.

They fail because they never ask anyone if the idea is worth paying for.

This workbook forces you to ask.

Your First Win (15 Minutes)

Send this message to 1 person today

Hey, quick question — are you still struggling with [problem]?

If they reply, you have your first signal.

Don't overthink it.

Who will you message?

What Counts as a Real Signal?

Real signals

- Someone asks a follow-up question
- Someone shares a real problem
- Someone asks for the price
- Someone says “can you do this for me?”

Not real signals

- “Cool idea”
- “Nice”
- Likes
- Silence

If you cannot tell the difference, you will waste months building the wrong thing.

How to Use This Workbook

This workbook is not for collecting ideas. It is for testing whether an idea deserves more time. Each day asks you to take one small action, face the realistic friction, and record what actually happened.

Use this for

Stop wasting time building ideas nobody wants. This 30-day workbook teaches you how to test demand before you build, using direct signals from real people.

Your notes

The Method

Do not build first. Look for signals first.

Find a real problem

Identify pain points or frustrations that people actively complain about. Look for recurring struggles.

Test: Can you describe the problem in a simple sentence, and do people immediately nod their head 'yes' when they hear it?

What goes wrong: You focus on a problem that's not painful enough, or one that only you personally experience. It's a 'nice to have,' not a 'must solve.'

Stop when: You have 3-5 distinct problems that seem to cause genuine frustration for a specific group of people.

Your notes

Find someone who cares

Locate specific groups of people (online or offline) who frequently discuss and struggle with the problems you identified.

Test: Can you find 10 people actively talking about this problem in detail on forums, social media groups, or review sites?

What goes wrong: You look in generic places, or you only find people who mention the problem once, not those deeply bothered by it.

Stop when: You have a list of 10-20 specific individuals or active communities where these people gather.

Your notes

Make a tiny offer

Create the smallest possible helpful thing that offers a glimpse of solving one aspect of their problem. This could be a single tip, a simple checklist, a small template, or a short email.

Test: Can you create this offer in under 1 hour? Is it immediately useful, even if it's very basic?

What goes wrong: You build too much too soon, or your offer isn't directly related to their immediate pain point. It feels like homework to them.

Stop when: You have 1-2 simple, highly relevant, and valuable tiny offers ready to share.

Your notes

Ask directly

Reach out to the people you found, share your tiny offer, and ask for their honest, specific feedback. Listen more than you talk.

Test: Are you getting direct replies, even if they're critical or show confusion? Are people actually using or looking at your tiny offer?

What goes wrong: You're too scared to ask, your message is vague, you only ask yes/no questions, or you get defensive about feedback.

Stop when: You've shared your tiny offer with at least 10 people and received clear feedback or engagement from a few of them.

Your notes

Try to get paid

If your tiny offer shows promise, propose a slightly bigger, more complete solution and ask if they would pay a small amount for it, even as a pre-order.

Test: Do people express clear interest in paying? Are they willing to commit money, even if it's just a few dollars, for a better solution?

What goes wrong: You never ask for money, you ask too early, or your proposed solution isn't compelling enough to justify spending money.

Stop when: You have a clear signal (yes/no/maybe) on people's willingness to pay for a more complete version, or you've learned you need to pivot.

Your notes

Conversion Tools

These tools help you avoid the most common beginner mistake: confusing polite interest with real demand.

The 10-Message Test

Send 10 direct, personal messages before judging an idea. Don't count likes, compliments, or vague interest. Count replies that show pain or willingness to act.

Notes

The $10 Tiny Offer Test

Turn your idea into one small thing someone could buy for around $10. If nobody wants the tiny version, don't build the big version yet.

Notes

The Polite Interest Trap

People saying 'cool idea' is not demand. Demand looks like questions, urgency, payment, referrals, or asking when it's available.

Notes

The Silence Rule

If people ignore the offer after multiple direct asks, treat silence as data. Don't argue with the market.

Notes

The 3-Signal Scorecard

Problem strength (1-5):

Reachability (1-5):

Willingness to pay (1-5):

Total score:

Interpretation 3-7: Stop

8-11: Pivot

12-15: Continue

Start Here: 15-Minute Tests

Spot a Problem in the Wild

Spend 20 minutes searching online forums (Reddit, Facebook Groups) for 3 distinct posts where people are clearly frustrated or asking for help with a specific issue.

Your notes

Offer a Quick, Free Tip

Reply to one of the posts you found with a single, genuine, actionable tip that might help with their problem. Don't sell anything.

Your notes

Get a Small Acknowledgment

Check if your helpful tip received any positive reaction (a 'like,' an upvote, or a 'thank you' reply). Even a small signal is a win.

Your notes

Copy/Paste Scripts

Use these as starting points. Rewrite them so they sound like you.

Initial Problem Discussion Outreach

Hey [Name], I saw your post in [group/forum] about [specific problem]. That sounds really tough. I've been noticing others struggle with that too. What's been the most frustrating part for you personally?

Notes

Offering a Tiny Solution (after initial chat)

Based on what you mentioned about [specific frustration], I put together a super simple [checklist/mini-guide/spreadsheet] that might help with [specific aspect of problem]. It's very basic, but I'm curious if it's even a little useful. Would you mind taking a quick look and telling me what you think?

Notes

Asking for Feedback on Tiny Solution

Thanks for checking out the [tiny solution]! I'm trying to make sure it's actually helpful. Did anything stand out as useful or confusing? Is there anything big missing that would make it more effective for you?

Notes

Directly Asking for Payment (if tiny solution was useful)

I'm really glad the [tiny solution] helped you with [specific benefit]! I'm considering building a more complete [template/tool/resource] that does [specific, bigger benefit]. It would cost [small price]. Is that something you'd be interested in pre-ordering or learning more about?

Notes

Handling 'Not Interested' or No Reply

No worries at all! I appreciate you taking the time to consider it. Thanks for being direct. Good luck with [their project/problem]!

Notes

Handling 'Maybe Later' / 'I'll Think About It'

Completely understand! No pressure at all. If you're open to it, could you share what might make it a 'yes' for you right now? Or what would need to be different? Just trying to learn what's truly useful.

Notes

Digital Side Hustle Case Study: The ‘Freelance Content Planner’ That Wasn’t

Idea

A simple Google Sheet template to help freelance writers organize their articles, clients, deadlines, and payment statuses more efficiently than basic notes or complex project software.

What I did

Searched Reddit r/freelancewriters and various Facebook groups for posts complaining about missed deadlines, juggling clients, and tracking payments. Identified 12 specific writers who had posted about these frustrations in the last month and sent them direct messages. Created a very basic Google Sheet (Client, Article Topic, Due Date) in 20 minutes and offered it for free to the 5 people who replied to my initial message. Followed up with those 5 people asking for feedback on the basic sheet. Proposed a ‘pro’ version of the sheet with more advanced tracking (payment status, word count, editor notes) for $7 to the 3 people who actually opened the basic sheet.

What happened

Out of 12 initial messages, 5 replied. Two said ‘I already have a system.’ Three accepted the free basic sheet. One of those three said it was ‘too basic,’ another simply ghosted me after receiving it, and the third said ‘it’s okay, but I can make this myself.‘ When I proposed the $7 pro version, zero people expressed interest. One replied ‘I definitely wouldn’t pay for a spreadsheet, I use Trello.’ Another said ‘Sounds like something I’d build myself if I needed it.‘

What I learned

My assumption that freelance writers would pay for a pre-made spreadsheet to manage their work was wrong. The problem (organization) was real, but my solution (a basic spreadsheet) wasn’t compelling enough to pay for. Most target users either already had a free solution, could easily build their own, or preferred more robust (and often free) project management tools. The ‘pain’ wasn’t acute enough for this specific solution.

Nobody bought the first version. That was the signal. Not failure.

What I would do differently

Instead of a general freelance planner, I should have targeted a hyper-specific sub-niche with a more unique problem, e.g., 'a system for new freelance translators to track multi-language projects and payment conversions.' Or, pivot away from spreadsheets and explore if a different type of solution (e.g., a simple email course on '5 Systems to Never Miss a Freelance Deadline') would get more traction. The problem wasn't big enough for a paid spreadsheet.

Your notes

30-Day Signal Plan

Each day has one action, one reality check, and one win condition. Complete the action before reading ahead.

Day 1: Brainstorm Broad Problems

Action

List 10-15 everyday problems you or people you know struggle with. Think about frustrations, inefficiencies, or things that cause annoyance.

Reality

It's easy to list big, vague problems like 'lack of money.' Try to get more specific.

Win condition

You have a list of at least 10 different problems, no matter how small they seem.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 2: Search Online Communities for Proof

Action

Pick 3-5 problems from Day 1. Go to Reddit, Facebook Groups, or niche forums and search for keywords related to these problems. Look for complaints.

Reality

You might find lots of chatter but no real pain, or a super niche group with only 2 members. Keep digging.

Win condition

You've found at least 5 posts/comments across different platforms where people are actively discussing one of your chosen problems.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 3: Refine Your Problem Statement

Action

Based on Day 2's research, choose the single most compelling problem. Write a short, clear statement describing it, including who has it and what pain it causes.

Reality

Your first statement might be too long or sound like an infomercial. Shorten it. Focus on the pain.

Win condition

You have one problem statement that is 1-2 sentences long and clearly identifies a group and their struggle.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 4: Identify Your 'Who Cares' Audience

Action

List 10-20 specific individuals (or pseudonyms from public posts) who are actively discussing your refined problem. Note where you found them (e.g., 'u/JaneDoe on r/sidehustle').

Reality

It's hard to find 20 real people. Don't worry if it's 5-10 very active ones. Don't create fake ones.

Win condition

You have a list of at least 10 specific usernames or profiles of people who are part of your target audience.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 5: Draft Initial Outreach Messages

Action

Using Script 1, draft 3 variations of your initial message to connect with people from Day 4. Focus on empathy and curiosity, not selling.

Reality

It's easy to sound salesy or like a robot. Read them aloud. Would you reply to this if you received it?

Win condition

You have 3 slightly different, personal-sounding messages ready to go.

You're not looking for motivation. You're looking for proof.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 6: Send Your First 5 Messages

Action

Send your personalized outreach messages to 5 different people from your list. Track who you messaged and which script you used.

Reality

You'll feel nervous. It's okay. Expect low reply rates. Don't get discouraged by silence.

Win condition

You have sent 5 genuine, non-salesy messages.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 7: Analyze Initial Replies (or Lack Thereof)

Action

Review any replies you received. Are people engaging? Are they asking questions? Are they ignoring you? Take notes.

Reality

You might get 0 replies. This is normal. Or you might get short, unhelpful replies. Note it all down.

Win condition

You have recorded any responses (or lack of responses) from your first 5 messages.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 8: Refine Problem & Outreach

Action

Based on Day 7, adjust your problem statement if needed. Tweak your outreach messages (maybe they were too vague, or too direct).

Reality

It's easy to want to give up. This is where you learn to pivot small things. Don't throw out the whole idea yet.

Win condition

You've made at least one specific change to your problem statement or messages.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 9: Brainstorm Tiny Offer Ideas

Action

Based on the problem and initial conversations, list 5 ideas for a 'tiny offer.' It should be something quick to make that offers a sliver of a solution.

Reality

It's tempting to think of a big product. Force yourself to think smaller. What's the *absolute minimum* helpful thing?

Win condition

You have 5 distinct ideas for tiny offers that can be created in under an hour each.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 10: Create Your First Tiny Offer

Action

Pick the easiest and most relevant tiny offer from Day 9 and create it. It should take no more than 60 minutes. Examples: 3-step checklist, 1-page template, 5 tips email.

Reality

It won't be perfect. That's the point. It just needs to be 'good enough' to be useful.

Win condition

You have a tangible tiny offer completed and ready to share.

You're not looking for motivation. You're looking for proof.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 11: Share Tiny Offer with New People

Action

Using Script 2, reach out to 5 new people (or engaged repliers from Day 7) and offer your tiny solution. Be clear it's a test.

Reality

Some people won't open it. Some won't care. That's data. Don't take it personally.

Win condition

You have offered your tiny solution to at least 5 individuals.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 12: Follow Up for Feedback (Tiny Offer)

Action

Using Script 3, follow up with the people you shared the tiny offer with. Ask specific, open-ended questions about its usefulness.

Reality

You might get very generic feedback like ‘it’s fine.‘ Push gently for specifics: ‘What part was most fine? What could be more fine?’

Win condition

You have sent follow-up messages asking for feedback to everyone who received your tiny offer.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 13: Analyze Tiny Offer Feedback

Action

Review all feedback. Did anyone find it genuinely useful? What specific parts? What did they say was missing or confusing? Score its usefulness (1-5).

Reality

Prepare for a mix of silence, vague praise, and brutal honesty. All of it's useful.

Win condition

You have clear notes on the perceived usefulness and shortcomings of your tiny offer.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 14: Adjust or Pivot Tiny Offer

Action

Based on Day 13's feedback: if your offer was useless, create a new tiny offer addressing a different angle of the problem. If it was somewhat useful, make improvements.

Reality

It's tempting to defend your work. Instead, listen to what people actually need. Be ruthless with your own assumptions.

Win condition

You have either a revised tiny offer or a completely new one, based on real feedback.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 15: Share Adjusted/New Tiny Offer

Action

Share your refined or new tiny offer with 5-10 more people (new ones, or those who gave lukewarm feedback on the first).

Reality

You might feel like you're bothering people. You're not, you're gathering data. Keep the messages polite and clear.

Win condition

You have shared your updated tiny offer with at least 5 more people.

You're not looking for motivation. You're looking for proof.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 16: Gather Feedback on Second Round

Action

Follow up with those who received the offer. Again, ask specific questions. Look for patterns in responses.

Reality

It's a numbers game. Some will engage, some won't. Focus on the ones who do.

Win condition

You have collected feedback on your second round of tiny offer distribution.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 17: Identify Core Value

Action

Review all feedback from both rounds. What's the single most valuable insight or helpful aspect people mentioned? What's the core problem you're truly solving?

Reality

This might be different from what you thought initially. Be open to new perspectives.

Win condition

You can clearly articulate the 'core valuable thing' your tiny offer provided, or aspired to provide.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 18: Outline a ‘Bigger’ Solution

Action

Based on the core value, draft an outline for a slightly bigger, more complete solution. What would solve the problem 80% instead of 20%?

Reality

Avoid making it a full product yet. Think ‘Version 1.0,’ not ‘the ultimate solution.’

Win condition

You have a bullet-point outline (5-10 points) of what a more complete solution would look like.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 19: Determine a Small Price Point

Action

Decide on a very small, introductory price for your outlined ‘bigger’ solution. Think $5, $10, $20, not $97.

Reality

It’s hard to put a price on something that doesn’t exist. Choose a low enough price that a ‘yes’ is a clear signal.

Win condition

You have a specific, low price point for your proposed bigger solution.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 20: Draft Your Payment Ask

Action

Using Script 4, draft messages to propose your bigger solution and ask for payment/pre-order from people who engaged positively with your tiny offer.

Reality

This is the scariest part for most. It needs to be clear, confident, but not pushy. Practice saying it aloud.

Win condition

You have a clear, concise message asking for payment for your proposed solution.

You're not looking for motivation. You're looking for proof.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 21: Send Your Payment Asks

Action

Send your payment ask messages to 5-10 people who showed the most positive interest or got the most value from your tiny offer.

Reality

Your heart will race. This is the moment of truth. Be ready for no replies, or polite declines.

Win condition

You have sent at least 5 messages directly asking if people would pay for your bigger solution.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 22: Handle ‘No Interest’ Replies

Action

Using Script 5, respond graciously to any direct ‘no’ or lack of response. Don’t burn bridges; just acknowledge and move on.

Reality

It stings to hear ‘no.’ Remember it’s about the idea, not you. Learn and move on.

Win condition

You have responded appropriately to any ‘no’ signals without being defensive.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 23: Handle ‘Maybe Later’ Replies

Action

Using Script 6, respond to anyone who expresses conditional interest (‘maybe later,’ ‘if it had X’). Try to understand their specific hesitations.

Reality

This is valuable data. Don’t try to convince them. Just learn what’s missing for them.

Win condition

You have asked clarifying questions to people who showed conditional interest.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 24: Analyze All Payment Signals

Action

Review every response to your payment ask. Who said yes? Who said no? Who said maybe? What were their reasons? Look for any 'pre-sales' or strong commitments.

Reality

A single 'yes' is a huge signal. Zero 'yeses' is also a signal. Don't sugarcoat the results.

Win condition

You have a clear summary of all payment-related responses and signals.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 25: Assess Signal Strength

Action

Based on Day 24, rate your signal strength: Strong (pre-sales), Moderate (strong interest, no payment yet), Weak (some interest, lots of hesitation), or None (no interest).

Reality

Be honest. It's better to admit a weak signal now than waste months building.

Win condition

You have a clear, honest assessment of your signal strength for your proposed solution.

You're not looking for motivation. You're looking for proof.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 26: If Signal is Strong: Map Next Steps

Action

If you got a strong or moderate signal, outline the very next steps to actually build and deliver the first version of your bigger solution.

Reality

Don't jump into a 6-month build. What's the fastest way to deliver the 'bigger' solution to your first customers?

Win condition

You have 3-5 concrete steps for building and delivering your product, informed by customer feedback.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 27: If Signal is Weak: Identify New Problem

Action

If your signal was weak or non-existent, list 3 new, potentially more painful problems (either for the same audience or a new one) to test next.

Reality

It's okay to let go of an idea. This process saved you from months of wasted effort. Celebrate that.

Win condition

You have a list of at least 3 new problem areas to explore.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 28: Outline New Test Strategy (if pivoting)

Action

If you're pivoting, outline a new testing strategy for one of the new problems from Day 27, applying what you learned from this test.

Reality

What did you do wrong this time? What will you do differently? Don't repeat the same mistakes.

Win condition

You have a fresh plan for how you'll approach the next signal test.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 29: Review & Consolidate Learnings

Action

Read through all your notes from the last 28 days. What were your biggest surprises? What are the key lessons you learned about your audience, your problem, or your approach?

Reality

The learning is the true product of this workbook. Embrace the lessons, even the hard ones.

Win condition

You have 3-5 concise bullet points summarizing your key learnings from the entire 30-day process.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Day 30: Commit to Your Next Step

Action

Make a firm decision: will you proceed with building your currently tested idea, or will you start a new Signal Test for a different problem? Write down your commitment.

Reality

This is your chance to stop procrastinating or building in secret. Make a clear decision and stick to it.

Win condition

You have a clear, written commitment to either ‘build’ or ‘test a new problem’ as your next immediate action.

You’re not looking for motivation. You’re looking for proof.

Daily notes

What happened today? What signal did you see? What is the next smallest action?

Notes

Signal Test Logs

Use these pages for extra tests, repeated asks, new audiences, and price checks.

Signal Test Log 1

Idea being tested

Write the specific idea, offer, or angle you're testing.

Your notes

Audience

Who exactly did you test this with?

Notes

Ask made

What did you ask them to do, answer, or pay for?

Notes

Signal received

What actually happened? Don't count hope. Count behavior.

Your notes

Signal Test Log 2

Idea being tested

Write the specific idea, offer, or angle you're testing.

Your notes

Audience

Price Test Notes

Price Test 1

What price did you ask for? Who did you ask? What happened?

Your notes

Price Test 2

What price did you ask for? Who did you ask? What happened?

Your notes

Price Test 3

What price did you ask for? Who did you ask? What happened?

Your notes

Price Test 4

What price did you ask for? Who did you ask? What happened?

Your notes

Signal Tracker

Date	Test	Signal	Next action

Stop / Pivot / Continue

Continue

What created a real signal: payment, specific request, repeated problem, urgency, or a direct yes?

Your notes

Pivot

What part seemed promising, but needs a different audience, offer, price, or message?

Notes

Stop

What produced silence, vague compliments, weak signals, or polite interest without action?

Notes

Next $10 Test

What is the smallest paid test you'll run next?

Your notes

Final Notes

What I learned about the market

What did real people show you?

Notes

What I learned about myself

What did you avoid, overthink, or discover?

Notes
